

NEW TECHNOLOGIES ARE CONSTANTLY CHANGING THE WAY INFORMATION IS DELIVERED.

Fortunately, we are on top it and can offer you the most current technology whether it's image acquisition, video and film production, post production and editing, DVD and CD authoring, live and canned internet streaming, or web development. In fact, we're now able to provide video that can be repurposed. Which simply means we can develop video that can cross over to different formats from video news releases to streaming videos to presentations on CD-ROM. As far as the range of equipment that we work with—you name it, we've got it. We incorporate only high-end, broadcast-quality Betacam SP and DV cameras. Plus, with our high definition camera we can create DVD images that look so good you'll swear it's 35 mm film—but for a lot less money. To round out our production capabilities, we also have some nifty toys like jib arms, POV cameras, and dollies. Our audio equipment is all high-end gear as well. When it comes to our post-production facility, the fun begins in our state-of-the-art linear and nonlinear edit suites. This is where we give life to your concept without compromising your specific communications goals. In other words: your message will never be relegated to secondary status behind creative arrogance or a bunch of techno-clutter which is no substitute for talent.

>VIDEO AND FILM PRODUCTION

- Creative direction
- Scriptwriting
- Production design and management
- Film, video and audio direction and production
- Field production
- Studio production
- Storyboards
- ENG/EFP
- Satellite broadcast
